MOUSSA MBAYE *Software Developer*

mbaye.moussa.pro@gmail.com • +33768698088 • Saint-Louis, France • mbayemoussa.com

Profile

Third-year student pursuing a Professional Bachelor's Degree in Software Design, Development and Testing, seeking a six-month internship in software development or full-stack development starting February 15, 2027.

Work Experience

05/2026 – Current
Saint-Louis

Developer
Veno
- Designed and built a SaaS booking platform with Next.js (App Router), Supabase and Stripe
- Developed the booking flow, professional showcase pages and availability management
- Designed the database schema, authentication and business logic
- Deploy and maintain the platform in production for active professionals

getveno.fr

10/2025 – 09/2026
Egerkingen, Switzerland

Logistics Agent
Post CH
- Organizing the daily sorting of packages based on delivery routes, contributing to the efficiency of the logistics process
- Developing and monitoring shipping schedules to optimize travel times
- Strategically allocating packages among delivery drivers to ensure optimal coverage of delivery routes

03/2024 – 04/2024
Colmar

Web Developer
Cité administrative
- Intranet Redesign: Analysis and Design: Conducted a study to identify end-user needs and define the objectives of the redesign.
- Developed a new information architecture to improve the site's usability and accessibility.
- Implemented the redesign using modern web technologies.
- Integrated key features to facilitate internal communication and access to company resources.

Project

SmartRoute
Mobile Logistics Route Optimization Application
- Full-stack mobile app for delivery route optimization and assignment: React Native (Expo, TypeScript) with a C# / ASP.NET Core API
- Server-side optimization engine: Nearest Neighbor, Cheapest Insertion and 2-opt on a road distance matrix
- Secured REST API (JWT, role management), geocoding and routing
- Offline mode for drivers (embedded SQLite)
- MongoDB, Docker, GitLab CI/CD

Education

09/2026 – 02/2027
Mulhouse

Professional Bachelor's Degree in Information Technology: Software Design, Development, and Testing
Université Haute-Alsace

- Full-stack application design and development: architecture, REST APIs, databases, web interfaces, and deployment.
- Completion of group projects following a full development cycle: requirements analysis, specifications, design, development, testing, documentation, and presentation.
- Awareness of application cybersecurity: securing APIs, managing authentication and authorization, validating input, and identifying common vulnerabilities.
- In-depth study of software quality principles: modular architecture, maintainability, technical documentation, and best development practices.

09/2022 – 06/2024
Colmar

BTS – Higher National Diploma in IT Services (Software Development track)
Lycée Camille Sée

- Software development in various languages such as: HTML, CSS, Bootstrap, PHP, C#, JavaScript.
- Development of RESTful APIs, knowledge of web vulnerabilities (SQL injection, XSS, CSRF) and security measures.
- Database design and management (MySQL).
- Cybersecurity for application solutions and their development.
- Object-oriented development in C# (Application.NetFramework, WindowsForms.NetFramework, SQL Server, ADO.Net).

Skills

Programming Languages
JavaScript, TypeScript, PHP, C#

Frameworks
